APPLIANCE ENGINEER

Subject/author index for Volume 6

This subject and author index is your guide to technical data published in Volume 6 of APPLIANCE ENGINEER for calendar year 1972.

In the subject index, bold face type identifies technical features, whereas normal type references items appearing in standard departments (Materials, Equipment & Processing; New Products; and New Literature). Numbers outside parentheses refer to issue numbers. Numbers in parentheses refer to page numbers.

A listing of book titles reviewed by AE's editors is provided below.

BOOK TITLES REVIEWED

Handbook of Integrated Circuits, 1 (47)
Properties of Engineering Materials, 1 (47)
A Practical Guide to Minicomputer Applications, 2 (12)
Simplified Statistical Analysis, 2 (12)
Industrial Applications of Technological Forecasting, 2 (42)
Industrial Electronics: Principles & Practice (#583), 2 (42)
How to Design Heating-Cooling Comfort Systems, 2 (42)
Product Liability and Safety, 3 (54)
Applying Precision Switches—A Practical Guide, 5 (50)
EIA/NEMA Standard RS-397: Thyristors, 5 (50)
Electromechanical System Components, 5 (50)

AUTHOR INDEX

Barton, Sidney L. and Lemon, Jason R.; "Dynamic testing and analysis techniques," 4 (31)
